Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 2, and 3 recite limitations related to a "phosphor" atom. As far as the examiner knows, a phosphor is a substance that exhibits phosphorescence, typically a transition metal compound or a rare earth metal compound of various types. The examiner believes that applicants are actually referring to the phosphorus atom(s) of the compound of formula I. The examiner seeks clarification from applicant. It should be pointed out that applicants have used the term "phosphor" in the specification as well. Claims 4-6 are rejected since the base claim is rejected under 112, second paragraph.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Whiteker et al (US 2004/0199023).

The bisphosphite compound of formula VI disclosed on page 13 of the reference, and the composition comprising said compound, and rhodium (p 17, table 1), anticipate the instant claims.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Whiteker et al.

The instant claims are drawn to a process for preparing an aldehyde by hydroformylation of an olefin in the presence of a bisphosphite of the instant invention and a Group 8 to 10 metal.

Whiteker et al teach the hydroformylation of vinyl acetate to form 2-acetoxypropionaldehyde and 3-acetoxypropionaldehyde, but do not expressly teach an example wherein ligand VI as taught therein is used. However, it would have been obvious to a person having ordinary skill in the art that all of the ligands taught by Whiteker et al, including compound VI, may have been employed in the hydroformylation process taught.
